

BLUEWHALE STACK

INDUSTRY BRIEF

BlueWhale Stack for Datacenter & Colocation

Your racks, to the U position, in the same inventory as your clouds.

September 2026 · Version 1.0 · BlueWhale Stack · www.bluewhalestack.com

BlueWhale Stack's Telco & Datacenter Edition — now in preview, GA Q4 2026 — extends the platform to the physical facility: rack, row and cage inventory at U-position level, power and cooling telemetry, space and capacity planning, metered colo tenant billing and a white-label portal under your own brand — so a colocation operator sells governed cloud services on the floor it already owns..

BlueWhale Stack's Telco & Datacenter Edition — now in preview, GA Q4 2026 — extends the platform to the physical facility: rack, row and cage inventory at U-position level, power and cooling telemetry, space and capacity planning, metered colo tenant billing and a white-label portal under your own brand — so a colocation operator sells governed cloud services on the floor it already owns.

U-level Rack · row · cage inventory (preview)	A/B Power feeds · PDU · kW telemetry (preview)
White-label Your brand, your domain	Q4 2026 Telco & Datacenter Edition general availability

The regimes, and the control that answers each

Regime	What it demands	The control that answers it
Tenant access control and badging	Every physical and logical access attributable to a tenant and a person	Access control and badging events in ITSM with a full audit trail (preview)
Metered billing accuracy	Space, power and services metered and reconciled per tenant	Per-tenant metering with billing feeds through the Partner Portal
Uptime tier commitments	Power and cooling headroom known before it is gone	PDU, kW, A/B feed and CRAC/CRAH telemetry into Observe with capacity alerts (preview)
Data residency for colo tenants	Sovereign hosting for government and regulated tenants	White-label sovereign hosting on your facility, governed by the same policy plane

What Datacenter & Colocation teams get

- Track racks, rows and cages to the U position — next to the clouds you already govern (preview)
- Manage power (PDU, kW, A/B feeds) and cooling (CRAC/CRAH) with environmental telemetry in Observe (preview)
- Plan space, capacity, cross-connects and access control in one system (preview)
- Bill colo tenants on metered usage through the Partner Portal
- White-label the portal with your logo, colours and domain

Use cases

Physical + cloud inventory in one plane DCIM inventory at U-position level — sites, racks, servers — sits in the same control plane as your public-cloud estate, so 'where does this workload run' has one answer. Modules: Inventory & Discovery, Cloud Connectors.	Power, cooling & capacity telemetry PDU, kW and A/B feed data plus CRAC/CRAH environmental telemetry flow into Observe, with capacity planning across space, power and cooling. Modules: Observe, Inventory & Discovery.
--	--

Metered colo billing, white-labeled Meter tenant usage and bill it through the Partner Portal under your own brand — logo, colours and domain — with Tenancy & Monetization behind the numbers. Modules: Tenancy & Monetization, Whalenomics, Identity & Access.	Operator-grade change & incident management Access control and badging events, cross-connect changes and facility incidents run through ITSM with P0–P4 SLAs and a full audit trail. Modules: ITSM, Identity & Access.

Edition: Telco & Datacenter (preview · GA Q4 2026)
Operators become cloud providers. Revenue per tenant, on capacity you own. Priced per operator or contract.

Delivered engagement — Telco & DC operators — Qatar, KSA, South Africa

Three operators that sold only space, power and links deployed the platform as their own white-label cloud service — multi-tenant, metered into their existing BSS — and reached first cloud-services revenue on capacity they already owned within months.

3 Markets, one platform	Months Time-to-market	White-label Each operator's own brand
-----------------------------------	---------------------------------	---

“We had cloud-services revenue on capacity we already owned within months. Building the platform ourselves had been scoped as a three-year programme we could not staff.”

VP Cloud Products, Telco & DC operators — Qatar, KSA, South Africa — as reported by the customer

Procurement, hosting and integration questions

- 01 How does DCIM data get into the platform?**
Through the Edge Agent in the facility, which collects from PDUs, environmental sensors and BMCs over Redfish, IPMI and SNMP and reports over outbound HTTPS — nothing inbound (preview).
- 02 Can we keep our existing DCIM tool?**
Yes during the transition; the platform's value is that rack, power and tenant data sit beside the cloud estate and the billing feed, which a standalone DCIM tool cannot do.
- 03 When is this generally available?**
The Telco & Datacenter Edition is in preview with design partners now; general availability is targeted for Q4 2026. White-label resale and metered billing through the Partner Portal run today on the Enterprise platform.

Platform certifications

ISO/IEC 27001:2022, ISO/IEC 27017, ISO/IEC 27018, ISO/IEC 27701 and ISO 22301, independently audited by accredited bodies; a CSA STAR Level 1 self-assessment, a GDPR compliance assessment and a SOC 2 Type II readiness assessment. Certificates and verification numbers are in the Trust Center.
