

BlueWhale Stack for Healthcare

Clinical systems governed in-country, with the evidence to show it.

September 2026 · Version 1.0 · BlueWhale Stack · www.bluewhalestack.com

BlueWhale Stack lets hospitals, insurers, CROs and digital-health companies run clinical, research and patient-facing systems across cloud and on-prem on the Enterprise Edition — with patient data pinned to an in-country region, access federated from the hospital directory, change control with an audit trail, and an air-gapped option for networks behind strict firewalls.

BlueWhale Stack lets hospitals, insurers, CROs and digital-health companies run clinical, research and patient-facing systems across cloud and on-prem on the Enterprise Edition — with patient data pinned to an in-country region, access federated from the hospital directory, change control with an audit trail, and an air-gapped option for networks behind strict firewalls. Available today.

In-region Patient data pinned to Mumbai or Frankfurt	Air-gapped Option for isolated clinical networks
SCIM Access follows the hospital directory	P0-P4 Change control with SLAs and audit trail

The regimes, and the control that answers each

Regime	What it demands	The control that answers it
DPDP Act 2023 / GDPR	Patient data localised, processing purpose-limited and evidenced	Residency pinned to Mumbai or Frankfurt; access and processing written to the audit trail
Clinical change control	Every production change approved, tracked and reviewable	ITSM change records with P0–P4 SLAs and a full audit trail
Workforce access hygiene	Clinicians, researchers and contractors get exactly the access their role needs, revoked on exit	IdP federation with SCIM provisioning; roles scoped by department and system
Availability of clinical systems	Degradation detected and escalated before it reaches the ward	Observe SLOs with burn-rate alerts; incidents opened automatically in ITSM

What Healthcare teams get

- Pin workloads, inventory records and audit entries to Mumbai (DPDP) or Frankfurt (GDPR), so localisation is a platform setting rather than a process
- Deploy air-gapped for isolated clinical networks, with signed offline updates and no call-home
- Federate the hospital directory over SAML/OIDC with SCIM provisioning, so clinicians and researchers get the right role on first login and lose it on the next sync
- See clinical, research and administrative estates — cloud and on-prem — in one inventory grouped by system
- Track every production change through ITSM with P0–P4 SLAs and keep the record for auditors

Use cases

Patient data residency & in-region storage Pin workloads, inventory and audit records to an in-country region — Mumbai for DPDP, Frankfurt for GDPR — with air-gapped deployment available for networks behind strict firewalls. Modules: Inventory & Discovery, Identity & Access.	Federated access for clinical & research staff Federate your IdP with SCIM provisioning so a new hire is granted the right role on first login and offboarded automatically on the next directory sync. Modules: Identity & Access.
Change control with audit evidence Every production change is tracked through ITSM with P0–P4 SLAs and breach detection, with a full record retained for auditors. Modules: ITSM, Inventory & Discovery.	Bundled observability for clinical systems Observe gives logs, metrics, traces and SLOs in one place, raising incidents automatically when a critical system degrades. Modules: Observe, ITSM.

Edition: Enterprise

The full platform, BYOC across every estate. Every estate answerable from one console. \$120,000 / year, flat and published.

Procurement, hosting and integration questions

01 Can research data and clinical data be governed separately?

Yes. Workloads are grouped by system, roles are scoped per workload, and residency and access policies apply per group — so research collaborators never inherit clinical access.

02 Do you support hospital networks that cannot connect outbound?

Yes — the air-gapped deployment class runs with no outbound connectivity and receives signed offline update bundles; the Edge Agent inventories the estate inside the network.

03 Which certifications does the platform hold?

ISO/IEC 27001, 27017, 27018 (PII in the cloud), 27701 (privacy) and ISO 22301, independently audited, plus a GDPR compliance assessment — certificates are in the Trust Center.

Platform certifications

ISO/IEC 27001:2022, ISO/IEC 27017, ISO/IEC 27018, ISO/IEC 27701 and ISO 22301, independently audited by accredited bodies; a CSA STAR Level 1 self-assessment, a GDPR compliance assessment and a SOC 2 Type II readiness assessment. Certificates and verification numbers are in the Trust Center.
