

CASE STUDY

Audit-ready across two regulatory regimes

Two leading banks, Singapore & Qatar

Answer an inspection from a system of record. September 2026 · Version 1.0 · www.bluewhalestack.com

Two banks running public cloud, private infrastructure and on-premises systems under MAS and Qatar central-bank supervision moved from weeks of manual evidence assembly per inspection to reports generated from one policy layer — and rehearsed the exit plans they had only ever documented.

Two banks running public cloud, private infrastructure and on-premises systems under MAS and Qatar central-bank supervision moved from weeks of manual evidence assembly per inspection to reports generated from one policy layer — and rehearsed the exit plans they had only ever documented.

The situation

A digital-first bank in Singapore and a prominent bank in Qatar ran channels on public cloud, analytics on private infrastructure and core-adjacent systems on-premises. Every supervisory touchpoint — MAS technology-risk norms in Singapore, central-bank requirements in Qatar — triggered weeks of manual evidence assembly, and their mandated exit strategies had never been tested.

What BlueWhale Stack did

One policy layer was enforced across every environment in both jurisdictions and mapped to each regime's controls, so a supervisory request became report parameters — regime, period, scope — rather than a manual assembly exercise. The Migration Engine's assessment and dependency mapping turned the exit annexure into a rehearsed annual drill with evidence on file, and Whalenomics cost visibility gave both CFOs a cloud bill they could decompose by business unit and jurisdiction.

“The last supervisory request took three days. Before, it took three weeks of five people pulling screenshots. And the exit plan has now been run as a drill, with the evidence filed.”

Chief Compliance Officer, Two leading banks, Singapore & Qatar — as reported by the customer

Enterprise Edition

The full platform, BYOC across every estate. Includes All nine capability families, Whale AI — including offline, Cloud Audit & Evidence · Migration Engine. Deployment: SaaS, BYOC, Sovereign.
