

INDUSTRY BRIEF

BlueWhale Stack for Telco & MSP

Sell governed cloud services on the network you already run.

Operators become cloud providers.

September 2026 · Version 1.0 · www.bluewhalestack.com

BlueWhale Stack lets telecom operators and MSPs run multi-tenant, white-label managed cloud services on the Enterprise platform today.

BlueWhale Stack lets telecom operators and MSPs run multi-tenant, white-label managed cloud services on the Enterprise platform today. The Telco & Datacenter Edition — now in preview, GA Q4 2026 — extends the same control plane to the network itself: VNF/CNF discovery, 5G core awareness, MEC site fleets, OSS/BSS integration and an SLA-managed control plane by service class.

99.9–99.999% SLA by service class in the Telco & Datacenter Edition, contracted at GA	5G-aware AMF · SMF · UPF · slices (preview)
MEC Edge site fleets managed as one (preview)	Q4 2026 Telco & Datacenter Edition general availability

The regimes, and the control that answers each

Regime	What it demands	The control that answers it
Tenant isolation and data separation	Each enterprise tenant provably separated on shared operator capacity	Native multi-tenancy with per-tenant identity scope, quotas and policies (Tenancy & Monetization, preview)
Carrier SLAs	Service levels contracted and reported per service class	SLA management by service class, 99.9–99.999%, reported per tenant (preview)
In-country data residency for enterprise and public-sector tenants	Tenant data on operator capacity inside the border	In-country deployment on operator infrastructure; sovereign configuration for government pursuits
Billing accuracy and auditability	Metered usage reconciled to invoices	Per-tenant metering feeding the operator's OSS/BSS through connectors (preview)

What Telco & MSP teams get

- Run multi-tenant, white-label managed services on the platform today, with per-tenant isolation and identity scope
- Provision from a governed catalog across multiple clouds for every tenant
- Discover and manage VNFs, CNFs and NFVI/VIM alongside cloud in one inventory (preview)
- Operate 5G core functions and network slices from the same plane (preview)
- Integrate OSS/BSS — Amdocs, Netcracker, Ericsson, Nokia, TM Forum — for metering and billing (preview)
- Manage service assurance and SLAs by service class, 99.9–99.999% (preview)

Use cases

White-label resale via Partner Portal — today Give MSP and SI partners a branded experience with end-customer management and consolidated billing through the Partner Portal, while each end-customer runs on the same governed platform. Modules: Identity & Access, Service Catalog.	Multi-tenant scale with per-tenant isolation — today Each tenant is isolated and governed; the unified inventory spans six public clouds plus on-prem, and identity federation maps each tenant's directory to platform roles. Modules: Inventory & Discovery, Identity & Access, Tenancy & Monetization.
Network estate in the same inventory — preview The Telco & Datacenter Edition discovers VNFs, CNFs and NFVI/VIM alongside your cloud estate, with 5G core awareness (AMF, SMF, UPF, slices) — one inventory from RAN edge to public cloud. GA Q4 2026. Modules: Inventory & Discovery, Cloud Connectors.	MEC fleets & service assurance — preview Manage MEC sites as a fleet with service assurance and SLA tracking by service class feeding ITSM. GA Q4 2026. Modules: Observe, ITSM.

Edition: Telco & Datacenter (preview · GA Q4 2026)

Operators become cloud providers. Revenue per tenant, on capacity you own. Priced per operator or contract.

Delivered engagement — Telco & DC operators — Qatar, KSA, South Africa

Three operators that sold only space, power and links deployed the platform as their own white-label cloud service — multi-tenant, metered into their existing BSS — and reached first cloud-services revenue on capacity they already owned within months.

3 Markets, one platform	Months Time-to-market	White-label Each operator's own brand
--	--	--

“We had cloud-services revenue on capacity we already owned within months. Building the platform ourselves had been scoped as a three-year programme we could not staff.”

VP Cloud Products, Telco & DC operators — Qatar, KSA, South Africa — as reported by the customer

Procurement, hosting and integration questions

01 What can an operator run today, before the Telco & Datacenter Edition is GA?

The full Enterprise platform as a white-label managed service through the Partner Portal, with per-tenant isolation. Network fabric features — VNF/CNF, 5G core, MEC, OSS/BSS connectors — are in the preview programme for design partners, GA Q4 2026.

02 Do we replace our OSS/BSS?

No. Per-tenant metering and billing feeds go into the OSS/BSS you run; connectors for Amdocs, Netcracker, Ericsson, Nokia and TM Forum interfaces are part of the edition.

03 How is the edition licensed?

Operator licensing shaped to the business — metered per network element, with revenue-share models available. Pricing is by conversation, not a published list.

Platform certifications

ISO/IEC 27001:2022, ISO/IEC 27017, ISO/IEC 27018, ISO/IEC 27701 and ISO 22301, independently audited by accredited bodies; a CSA STAR Level 1 self-assessment, a GDPR compliance assessment and a SOC 2 Type II readiness assessment. Certificates and verification numbers are in the Trust Center.
