

Rent per megawatt became revenue per tenant

Telco & DC operators — Qatar, KSA, South Africa

Operators become cloud providers.

September 2026 · Version 1.0 · www.bluewhalestack.com

Three operators that sold only space, power and links deployed the platform as their own white-label cloud service — multi-tenant, metered into their existing BSS — and reached first cloud-services revenue on capacity they already owned within months.

Three operators that sold only space, power and links deployed the platform as their own white-label cloud service — multi-tenant, metered into their existing BSS — and reached first cloud-services revenue on capacity they already owned within months.

3 Markets, one platform	Months Time-to-market	White-label Each operator's own brand

The situation

Three operators — a leading Qatar telecom operator, a Saudi datacenter group and a South African telecom — held strong facilities and connectivity but sold only space, power and links, while cloud services revenue accrued to global providers. Each faced the same build-vs-buy verdict: a multi-tenant cloud platform was a multi-year software programme none of them could staff.

What BlueWhale Stack did

As design partners in the Telco & Datacenter Edition preview, each operator deployed the platform as its own white-label cloud service, with native multi-tenancy, service catalogs and per-tenant metering feeding its existing BSS and billing. OSS/BSS integration put the platform inside their existing commercial machinery, and a marketplace opened to ISVs — with SLA accountability and tenant-health visibility driving renewals.

"We had cloud-services revenue on capacity we already owned within months. Building the platform ourselves had been scoped as a three-year programme we could not staff."

VP Cloud Products, Telco & DC operators — Qatar, KSA, South Africa — as reported by the customer

Telco & Datacenter Edition

Operators become cloud providers. Includes Tenancy & Monetization, White-label portals & catalog, OSS / BSS & billing integration. Deployment: SaaS, BYOC, Telco Edge, Datacenter Edge.
