

DATASHEET

Telco & Datacenter Edition datasheet

Enterprise platform extended for infrastructure operators.

Operators become cloud providers.

September 2026 · Version 1.0 · www.bluewhalestack.com

The Enterprise platform extended for telecom and datacenter operators — NFV/5G network fabric, DCIM at U-position level, native multi-tenancy and white-label branding, with per-tenant metering into your BSS.

Full Enterprise platform extended for two operator personas on one licensed edition. For telecom operators: a network fabric — VNF/CNF discovery, 5G core awareness (AMF/SMF/UPF/slices), NFVI/VIM, MEC site management, OSS/BSS connectors (Amdocs, Netcracker, Ericsson, Nokia, TM Forum), carrier-grade SLA management. For datacenter and colocation operators: physical datacenter management (DCIM) — rack/row/cage inventory at U-position level, power (PDU, kW, A/B feeds), cooling & environmental (CRAC/CRAH), space & capacity, cross-connect, access control. Both get native multi-tenancy and white-label branding.

Contact sales Operator licensing shaped to the business — revenue-share models available; regional pricing on request	SaaS · BYOC · Telco Edge · Datacenter Edge Deployment models
Spark · Tide · Abyss / Predictive Ops (carrier & operator tier) Whale AI tier	99.9–99.999% (by service) Platform SLA

The outcome

Revenue per tenant, on capacity you own. Includes Tenancy & Monetization, White-label portals & catalog, OSS / BSS & billing integration.

What is included

- Full Enterprise platform base, extended for infrastructure operators
- Telco: VNF/CNF, 5G core, NFVI/VIM discovery & MEC fleet management
- Telco: OSS/BSS connectors (Amdocs, Netcracker, Ericsson, Nokia, TM Forum), SLA by service class up to 99.999%
- Datacenter: rack/row/cage inventory at U-position level, power & cooling (DCIM)
- Datacenter: colo tenant billing (metered) via Partner Portal
- Native multi-tenancy & white-label branding for both operator types

Scale, quotas and support

Dimension	Telco & Datacenter
Tenants	Multi-tenant
Cloud accounts (included)	Enterprise scale
Managed resources (MRU)	Network elements · per-rack metered
Users / seats	Carrier · operator scale
Whale AI tier	Spark · Tide · Abyss / Predictive Ops
AI tokens / month	Carrier / operator tier
Deployment models	SaaS · BYOC · Telco/DC Edge
Clouds supported	All 6 + network & physical DC
SLA	99.9–99.999% (by service)
Support	Carrier/operator-grade 24×7 (mandatory)

Modules in the Telco & Datacenter Edition

Inventory & Discovery A live, unified map of every asset — across every cloud and on-prem. (Generally available)	Cloud Connectors One control plane over six public clouds, plus private, hybrid & edge. (Generally available)
Identity & Access One identity fabric — federate your IdP and auto-provision access everywhere. (Generally available)	Service Catalog Provision approved cloud resources — no consoles. (Generally available)
ITSM Cloud-ops-native incident, change & problem management. (Generally available)	Observe Production APM — logs, metrics, traces & SLOs, bundled. (Generally available)
Whalenomics FinOps — budgets, forecasts, chargeback & continuous optimization. (Whale AI use cases live)	Migration Engine 6R assessment, rehearsed waves & rollback for cloud migration. (Assessment live)
WhaleForge IaC YAML DSL → real Terraform HCL, with live diagrams. (Beta)	Landing Zone Builder Design compliant cloud foundations visually. (Beta)
Cloud Audit & Evidence Controls monitored continuously — the auditor's report generated on demand. (Included in Enterprise & up)	Tenancy & Monetization Native multi-tenancy, catalogs, marketplace and per-tenant metering. (Preview)
Whale AI A horizontal AI layer across every module — 50+ use cases, able to run fully offline. (Generally available)	

A good fit for

- Telecom operators and MVNOs that want to sell governed cloud services on their own network and edge
- Colocation and datacenter operators converting space-and-power tenants into cloud customers
- Carrier-grade MSPs that need native multi-tenancy, white-label portals and metering into their BSS

Look elsewhere if

- Enterprises consuming cloud for their own use — Enterprise covers that without the operator layer
- Operators that need the network fabric or DCIM features in production before Q4 2026 — those are in preview with design partners

For telecom operators

The operator already owns the enterprise relationship, the network and the SLA culture — what's missing is the platform layer that turns those assets into cloud products. This edition is that layer: deployed on the operator's own infrastructure, white-labelled under the operator's brand, with tenancy, metering, governance and BSS-ready billing native to the platform.

Revenue streams

Managed enterprise cloud — Recurring · flagship Fully managed, governed multi-cloud delivered to enterprise customers through the operator's platform.	Multi-tenant cloud platform — Recurring · metered Enterprise tenants on operator infrastructure with strict isolation and self-service.
White-label cloud marketplace — Recurring · attach A branded catalog of the operator's own and partner services, self-provisioned under governance.	Edge & hybrid services — Premium · metered Tower, metro and premise edge sold as governed capacity for latency-sensitive workloads.
Migration & professional services — Per-project Enterprise workload migration industrialized by the built-in Migration Engine.	

Phased delivery

- 1 Foundation · Weeks 1–6**
 Platform live in the operator's core DC; BSS and identity integration; operator console and first catalog; two lighthouse enterprise tenants.
- 2 Launch · Weeks 6–14**
 White-label marketplace launched to the enterprise base; Migration Engine in production; per-tenant billing verified end-to-end.
- 3 Scale · Weeks 14–26**
 Edge sites federated; government and BFSI pursuits with the sovereign configuration; managed-services wrapper on the installed base.
- 4 Expand · Quarter 3+**
 Wholesale / partner tenancy opened; vertical solutions packaged; the operator's own service roadmap runs on the platform.

For datacenter & colocation operators

The operator owns the assets, the trust and the customer — what's missing is the software layer that turns infrastructure into products. This edition is that layer: deployed in the operator's own facilities, white-labelled under the operator's brand, with tenancy, metering, governance and billing native to the platform rather than assembled around it.

Revenue streams

Tenanted cloud services — Recurring · metered Compute, storage and network sold as governed services over the existing footprint — colocation customers converted to cloud customers.	GPU & AI capacity services — Premium · metered Tenancy, quota and cost governance over GPU estates — utilization visible, billable and sellable per customer.
Sovereign hosting — Contracted · multi-year Data-resident, locally governed cloud for government and regulated enterprise — the moat offering.	Migration & onboarding services — Per-project The built-in Migration Engine turns every tenant onboarding into a faster, repeatable professional-services event.
Managed services wrapper — Recurring · attach Operations, security and compliance services layered per tenant on the same console.	

Phased delivery

- 1 Foundation · Weeks 1–6**
 Platform deployed in the primary facility; operator console, identity and billing integration live; two pilot tenants onboarded.
- 2 Monetize · Weeks 6–14**
 White-label catalog launched; Migration Engine in production for onboarding; GPU governance live; per-tenant billing feeds verified.
- 3 Scale · Weeks 14–26**
 Second site federated; sovereign offering packaged for government pursuits; managed-services wrapper launched on the installed base.
- 4 Expand · Quarter 3+**
 Edge sites added; marketplace expanded; the operator's own service roadmap runs on the platform.

Licensing and deployment questions

01 What is in preview and what runs today?

The Enterprise platform base, white-label resale through the Partner Portal and per-tenant isolation run today. Tenancy & Monetization, VNF/CNF and 5G discovery, MEC fleet management, OSS/BSS connectors and DCIM are in the preview programme, GA Q4 2026.

02 How is it priced?

Operator licensing shaped to the business: metered per network element for telcos or per rack for datacenter operators, with revenue-share models available. Pricing is agreed per operator, not published.

03 What does joining the preview involve?

Design partners deploy the edition on their own infrastructure with BlueWhale engineers, shape the roadmap through the customer council, and move to GA licensing on a pre-agreed basis.

Proven before commitment

Every edition starts with the 90-day prototype: a half-day discovery workshop that agrees success criteria with your technology and finance leaders, then the platform on your own estate for 90 days with no licence cost, scored on day 90 before any licensing decision.
