

COMPANY PROFILE

BlueWhale Stack

One control plane for every cloud — a global platform and consulting company.

Product • Consulting • Implementation — founded 2018, platform launched 2026

United States • United Arab Emirates • India

About BlueWhale Stack — Executive Summary

Abhishek Pangerkar

Founder & CEO

Our vision is to simplify how organizations manage the complexity of modern cloud environments — a platform for seamless operation across hybrid and multi-cloud ecosystems with visibility, governance and operational efficiency. Our mission: empower organizations and digital infrastructure providers to accelerate cloud adoption, optimize operations, and unlock the full potential of the cloud.

• Foundation and Experience (2018)

Founded as a cloud consulting firm — strategy, transformation, migration and hybrid operations.

• Learning from Real Business Challenges

Enterprises struggling with hybrid and multi-cloud — visibility, governance, cost control, complexity.

• Creation of BlueWhale Stack (2026)

The field experience productised: a platform to simplify distributed cloud management.

• A Global Company Today

Entities in the US (Delaware), UAE (Ajman) and India (Mumbai) — product, sovereign focus, delivery.

About BlueWhale Stack — The Journey

From cloud consulting firm to global Cloud Management Platform company — eight years of solving one problem: complexity across distributed cloud.

Product Offerings

The platform and what ships inside it.

BlueWhale Stack Platform

One control plane across public, private, virtualization, hybrid and edge — 54 capabilities · nine families · four editions.

Whalenomics · FinOps

Budgets, forecasts, chargeback, continuous optimization — spend decomposed to workload, department or tenant.

Whale AI — incl. offline

AI for operations, documentation and compliance — your choice of model, able to run fully inside the perimeter.

Migration Engine

Assessment, dependency mapping, rehearsed waves and cutover across six platforms — entry, movement and exit industrialized.

Cloud Audit & Evidence

Controls monitored continuously — examiner-grade reports on demand, for the board, the auditor and the regulator.

BlueWhale Stack Fabric

Flagship initiative · India — datacenter capacity unified on one platform: operator monetization plus a sovereign cloud.

Service Offerings

Consulting and implementation — delivered globally, with or without the platform.

App Modernization

Legacy applications re-architected cloud-native — microservices, containers and governed landing zones, without downtime.

Infrastructure Modernization

Datacenter and virtualization estates modernized — hybrid architectures and a rehearsed migration factory.

Data Modernization

One governed data platform — pipelines, quality and shared definitions feeding analytics and every AI use case.

AI Design & Modernization

AI adoption inside the perimeter — use-case design, Whale AI deployment, custom models the customer owns outright.

Delivered by BlueWhale or certified partners — every engagement lands governed on the platform.

Digital Experience Platform — One Platform. Every Industry. Every Estate.

Industry segments → experience layer → one platform core → integrations → every estate. One slide, the whole system.

Four Editions, One Architecture

Each edition targets its industries and adds the modules they need — an upgrade is a licence change, not a migration.

Standard

Governed cloud for a single estate

WHO IT TARGETS

Mid-market and single-cloud enterprises

KEY MODULES — THE FOUNDATION

Sovereign Operations Air-gapped Classes State-Audit Evidence

One architecture — an upgrade is a licence change, not a migration. Commercial details are shared in the discovery workshop.

Success Story — Banks in Singapore & Qatar

Audit-ready across two regulatory regimes — inspection preparation cut from weeks to days.

BANKING & FINANCIAL SERVICES

THE CHALLENGE

Two leading banks — a digital-first institution in Singapore and a prominent bank in Qatar — ran channels on public cloud, analytics on private infrastructure and core-adjacent systems on-premises. Every supervisory touchpoint under their respective regimes (MAS technology-risk norms; central-bank requirements in Qatar) triggered weeks of manual evidence assembly, and mandated exit strategies had never been tested.

HOW BLUEWHALE STACK SOLVED IT

- One policy layer enforced across every environment in both jurisdictions — evidence generated continuously, not assembled per inspection
- Regulatory obligations mapped to platform controls per regime — supervisory requests answered as report parameters
- Migration Engine turned the exit annexure into a dependency-mapped, rehearsed annual drill
- Whalenomics gave both CFOs a cloud bill decomposable by business unit and jurisdiction

THE BENEFITS

- ✓ **Inspection preparation reduced from weeks to days in both banks**
- ✓ **Exit-plan compliance demonstrated with drill evidence**
- ✓ **Repeat findings on control consistency eliminated**
- ✓ **Cloud spend owned, budgeted and charged back per entity**

INDUSTRY ARCHITECTURE — AT A GLANCE

Channels · lending · analytics · reg-reporting → BlueWhale Enterprise (BYOC · in-country per jurisdiction) — audit · identity · Whalenomics · migration → public cloud + private + on-prem

Client identities withheld under confidentiality — anonymized delivered engagements.

Success Story — Defence & Interior Ministries, Middle East

A sovereign, air-gapped government cloud — with AI that never leaves the perimeter.

GOVERNMENT & PUBLIC SECTOR

THE CHALLENGE

A Ministry of Defence and a Ministry of Interior in the Middle East operated highly sensitive digital estates across directorates and agencies — with strict sovereignty mandates, disconnected and air-gapped environments, no uniform security baseline across units, and audit responses assembled directorate by directorate under national-security-grade scrutiny.

HOW BLUEWHALE STACK SOLVED IT

- Government Edition deployed fully in-country with air-gapped classes for the most sensitive estates
- Directorate-level segregation under central policy — autonomy inside national guardrails
- Whale AI operating entirely inside the perimeter — machine assistance with zero external exposure
- Continuous activity trails and examiner-grade reporting across every directorate

THE BENEFITS

- ✓ **One security baseline across every directorate and agency**
- ✓ **Sovereignty demonstrated by architecture, not assertion**
- ✓ **Audit queries answered from a system of record in minutes**
- ✓ **Modern AI adopted inside classified-grade boundaries**

INDUSTRY ARCHITECTURE — AT A GLANCE

Directorates · agencies · field units → BlueWhale Government (sovereign · air-gapped) — segregation · audit · offline Whale AI · identity → national datacenters + disconnected sites

Client identities withheld under confidentiality — anonymized delivered engagements.

Success Story — Telco & DC Operators — Qatar • KSA • South Africa

Rent per megawatt became revenue per tenant — operator clouds live in months, not years.

TELECOM & DATACENTER OPERATORS

THE CHALLENGE

Three operators — a leading Qatar-based telecom operator, a Saudi datacenter group and a South African telecom — held strong facilities and connectivity but sold space, power and links, the low-margin rungs, while cloud services revenue accrued to global providers. Each faced the same build-vs-buy verdict: a multi-tenant cloud platform was a multi-year software programme none could staff.

HOW BLUEWHALE STACK SOLVED IT

- Telco & Datacenter Edition deployed as each operator's white-label cloud platform
- Native multi-tenancy, service catalogs and per-tenant metering feeding each operator's own BSS and billing
- OSS/BSS and invoicing integration — the platform inside their existing commercial machinery
- Marketplace opened to ISVs; SLA accountability and tenant-health visibility driving renewals

THE BENEFITS

- ✓ **Cloud services revenue live on existing capacity in all three markets**
- ✓ **Time-to-market in months — no platform build, no platform team**
- ✓ **Every tenant metered, billed and governed identically**
- ✓ **A service catalog each sales team can actually sell**

INDUSTRY ARCHITECTURE — AT A GLANCE

Operators' enterprise & wholesale customers → Operator Clouds (white-label on BlueWhale T&DC) — tenancy · catalog · metering · OSS/BSS · SLA → the operators' own datacenters, three countries

Client identities withheld under confidentiality — anonymized delivered engagements.

Success Story — Qatar Media Network

A global newsroom governed as one estate — with Arabic-English AI fully offline.

MEDIA & GLOBAL ENTERPRISE

THE CHALLENGE

A Doha-headquartered global media network ran broadcast, streaming, decades of archive and worldwide bureaus across many estates — under sustained, sophisticated cyber threat, and with a professional obligation particular to journalism: newsroom material, sources and unpublished work must never reach external AI services.

HOW BLUEWHALE STACK SOLVED IT

- One governance plane across broadcast, digital, archive and bureau estates
- Bureaus worldwide managed as offline-tolerant edge estates with headquarters-grade policy and scanning
- Whale AI operated fully inside the perimeter — Arabic-English archive intelligence, transcription and research on the network's own models
- Whalenomics decomposed streaming and production cost per channel, platform and program

THE BENEFITS

- ✓ **Uniform security posture including the most exposed bureau sites**
- ✓ **Modern AI adopted with zero external data exposure**
- ✓ **Cost per stream and per program made visible to media finance**
- ✓ **Audit-ready evidence across every operating jurisdiction**

INDUSTRY ARCHITECTURE — AT A GLANCE

Broadcast · streaming · archive · newsroom · bureaus → BlueWhale Enterprise (sovereign · BYOC) — security · edge agent · offline Whale AI · Whalenomics → own facilities + clouds + bureau edge

Client identities withheld under confidentiality — anonymized delivered engagements.

Certified, and Built for Your Auditor

Independently assessed management systems — and the compliance alignment engineered into the platform itself.
