

BLUEWHALE STACK | ENTERPRISE EDITION

BlueWhale Stack Enterprise Edition

One control plane for audit-ready multi-cloud — governance, Whalenomics FinOps, migration at scale and AI-assisted operations across every environment the enterprise runs.

Evidence by default

A control proven once is evidenced everywhere — audits become report generation.

Migration as a machine

Assess, map, replicate, cut over — repeatable across six platforms.

Economics the CFO signs

Whalenomics: budgets, forecasts, chargeback and showback by business unit.

WHERE THE EDITION SITS — INDUSTRIES TO INFRASTRUCTURE

BFSI	Healthcare	Manufacturing	Energy	Media	Aviation	Large Retail
------	------------	---------------	--------	-------	----------	--------------

Industry outcomes, consumed through the Enterprise Edition

Every use case inherits governance, sovereignty and cost control by construction.

BlueWhale Stack — one platform, four editions

THIS EDITION

Unified Cloud Mgmt	Whalenomics • FinOps	Security & Identity	Whale AI	Migration Engine	Multi-Tenancy
--------------------	----------------------	---------------------	----------	------------------	---------------

Signature capability families — the full portfolio map is on page 2.

Any infrastructure — governed as one estate

Public cloud • private stacks • virtualization • on-premises datacenters and edge.

WHY THIS EDITION

For the regulated enterprise, fragmented tooling is exposure. The Enterprise Edition collapses the assembled stack — management suite, cost tool, audit tooling, integration glue — into one platform, with the two capabilities regulated estates need most: evidence by default, and migration as a repeatable machine.

AT A GLANCE

LIST PRICE USD 120,000 / yr • flat	DEPLOYMENT SaaS • BYOC • Sovereign	QUOTAS 100 accounts • 1M resources • 1,000 users	SLA 24x7 • 99.9% • L3 + critical bridge
--	--	--	---

Evaluate on your own estate

Request a discovery workshop or a full-featured 90-day prototype through your BlueWhale Stack representative or authorized partner.

The BlueWhale Stack Portfolio — 54 Capabilities, One Control Plane

The complete platform, mapped. Gold-highlighted capabilities are licensed and decisive in the Enterprise Edition; the remainder shows where the platform extends as the estate — or the business model — grows.

⚙️ Management & Delivery - Unified Cloud Mgmt - Operator Console - Service Catalog - Landing Zone Builder - Extended Connectors - Edge Agent	📊 Whalenomics • FinOps - Cost Reports - Budgets & Forecasts - Chargeback / Showback - Optimization Advisor - Per-Tenant Cost Gov. - Operator Billing Feeds	🛡️ Security & Identity - Identity & Access - SSO • Entra / Workspace - Security Scanning - Advanced Scanning - Data Residency Control - Policy Enforcement
✅ Governance & Audit - Compliance Monitor - Cloud Audit - Audit-Ready Reports - Regulatory Reporting - Activity Logging - Evidence Export	🐋 Whale AI - Whale AI Assistant - Offline AI Models - AI Documentation - AI Compliance Reports - Ops Copilot - Knowledge Base	🔄 Migration & Discovery - Discovery & Assessment - Dependency Mapping - Migration Engine - Replication & Cutover - Decommissioning 6-Platform Coverage
🖥️ Observability & ITSM - Observability - Health & Alerts - ServiceNow • Jira - Zoho • Zendesk - Runbooks 24x7 Ops Bridge	👥 Tenancy & Monetization - Native Multi-Tenancy - Tenant & Partner Program - White-Label Marketplace - SLA Accountability - Tenant Health & Renewals - Automated Provisioning	🏛️ Sovereign Operations - Air-Gapped Deployment - Dark-Site Updates - Ministry Segregation - Inter-Ministry Services - Citizen-Scale Ops - Multi-DC Federation

■ **Gold** = included and decisive in the Enterprise Edition • white = available in the wider platform • every edition inherits the shared core.

DEPLOYMENT TOPOLOGIES

SAAS Fastest path for connected estates	BYOC Control plane in your own tenancy	SOVEREIGN On-premises where law requires
--	---	---

One platform, four editions — capabilities compound

Standard → Enterprise → Telco & Datacenter / Government: each edition inherits everything below it and adds the modules its operating model demands. An upgrade is a licence change, not a migration.

MIGRATION COVERAGE

The Migration Engine assesses, maps dependencies, replicates and cuts over workloads across **AWS • Microsoft Azure • Google Cloud • VMware • Nutanix • Hyper-V** — with decommissioning closing the loop.

Features & benefits

Theme	Feature	What it does	Benefit
INSIGHT	Full-estate discovery	Cloud, private and on-premises estates inventoried with dependencies	One system of record across every environment
	Observability	Operational visibility correlated across environments	Issues found before tenants and auditors do
	Whale AI — incl. offline	AI-assisted operations, documentation and reporting; offline models available	AI leverage without data ever leaving the estate
CONTROL	Centralized policy	Uniform enforcement and continuous compliance monitoring everywhere	A control proven once is proven everywhere
	Audit-ready evidence	Logs and reports generated at examiner grade	Audit preparation collapses from weeks to days
	Whalenomics FinOps	Budgets, forecasts, chargeback and showback by business unit	Cloud economics the CFO signs — and owns
AUTOMATE	Migration Engine	Assessment, dependency mapping, replication, planned cutover, decommissioning	Datacenter exits run as programmes, not heroics
	Landing Zone Builder	Standardized, policy-compliant environment construction	Every new workload born governed
	Advanced ITSM	Native ServiceNow, Jira, Zoho, Zendesk integration	Cloud operations inside enterprise change management

AT A GLANCE

LIST PRICE USD 120,000 / yr • flat	DEPLOYMENT SaaS • BYOC • Sovereign	QUOTAS 100 accounts • 1M resources • 1,000 users	SLA 24x7 • 99.9% • L3 + critical bridge

Contract terms: 1 / 3 / 5 year • 2-year –10% • 3-year –15% • regional pricing on request. Specifications as of August 2026; not a contractual specification.

Digging Into the Work — Before and After

🔗 Datacenter exit as a programme

AS IS

- Legacy estate, exit deadline
- External tools per migration wave
- Dependencies discovered in outages
- Risk concentrated in cutover weekends

TO BE • ON BLUEWHALE STACK

- Automated assessment & dependency maps
- Waves planned, replicated, rehearsed
- Controlled cutover & decommissioning
- Six platforms, one engine, repeatable

Pattern from the field: dependency mapping typically reveals 20–40% more interconnections than the CMDB records — found before cutover, not during it.

✅ Audit readiness across four environments

AS IS

- Controls differ per environment
- Evidence assembled by hand each audit
- Findings on consistency, not intent

TO BE • ON BLUEWHALE STACK

- Uniform policy enforced platform-wide
- Continuous compliance monitoring
- Examiner-grade reports on demand

Pattern from the field: the audit binder becomes a report parameter — the same control, evidenced identically, in every environment.

GETTING STARTED

Step	What happens	Duration
1 • Discovery workshop	Map the estate, the regulatory posture and the ambition; agree prototype scope.	One week
2 • Working prototype	The Enterprise Edition live on the organization's own environments — full-featured, 90 days, no licence cost.	2–4 weeks to first insight
3 • Evaluation on evidence	Capability scorecard and findings — judged on the organization's own numbers.	Day-90 review
