

BLUEWHALE STACK | TELCO & DATACENTER EDITION

BlueWhale Stack Telco & Datacenter Edition

Native multi-tenancy, white-label marketplaces and per-tenant economics — the platform layer that turns operator infrastructure into monetizable cloud services.

Tenants, isolated by construction

Strict boundaries across enterprises, partners and verticals — platform-enforced.

Your brand, your marketplace

Customers self-provision from operator-branded portals under operator governance.

Every unit billable

Per-tenant metering, budgets and billing feeds — consumption becomes invoice.

WHERE THE EDITION SITS — INDUSTRIES TO INFRASTRUCTURE

Telecom Operators

Datacenter & Colo

MSPs

Sovereign Clouds

GPU / AI Providers

Industry outcomes, consumed through the Telco & Datacenter Edition

Every use case inherits governance, sovereignty and cost control by construction.

BlueWhale Stack — one platform, four editions

THIS EDITION

Unified Cloud Mgmt

Whalenomics • FinOps

Security & Identity

Whale AI

Migration Engine

Multi-Tenancy

Signature capability families — the full portfolio map is on page 2.

Any infrastructure — governed as one estate

Public cloud • private stacks • virtualization • on-premises datacenters and edge.

WHY THIS EDITION

Operators own the assets, the trust and the customer; what is missing is the software layer that turns infrastructure into products. This edition is that layer — the operator's own cloud platform, white-labelled on proven software: the operator owns the tenant, the brand and the bill.

AT A GLANCE

LICENSING

Operator model • revenue share available

DEPLOYMENT

Operator DC • sovereign • SaaS

TENANCY

Unlimited • strict isolation

SLA

24x7 operator-grade • joint bridge

Evaluate on your own estate

Request a discovery workshop or a full-featured 90-day prototype through your BlueWhale Stack representative or authorized partner.

The BlueWhale Stack Portfolio — 54 Capabilities, One Control Plane

The complete platform, mapped. Gold-highlighted capabilities are licensed and decisive in the Telco & Datacenter Edition; the remainder shows where the platform extends as the estate — or the business model — grows.

⚙️ Management & Delivery Unified Cloud Mgmt Operator Console Service Catalog Landing Zone Builder Extended Connectors Edge Agent	📊 Whalenomics • FinOps Cost Reports Budgets & Forecasts Chargeback / Showback Optimization Advisor Per-Tenant Cost Gov. ■ **Gold** = included and decisive in the Telco & Datacenter Edition • white = available in the wider platform • every edition inherits the shared core.

DEPLOYMENT TOPOLOGIES

OPERATOR DC Your facilities — sovereign by default	MULTI-DC + EDGE Federated as one control plane	WHITE-LABEL SAAS Operator-branded to every tenant
--	--	---

One platform, four editions — capabilities compound

Standard → Enterprise → Telco & Datacenter / Government: each edition inherits everything below it and adds the modules its operating model demands. An upgrade is a licence change, not a migration.

MIGRATION COVERAGE

The Migration Engine assesses, maps dependencies, replicates and cuts over workloads across **AWS • Microsoft Azure • Google Cloud • VMware • Nutanix • Hyper-V** — with decommissioning closing the loop.

Features & benefits

Theme	Feature	What it does	Benefit
MONETIZE	White-label marketplace	Operator-branded portals and standardized catalogs per tenant	Colocation and connectivity customers become cloud customers
	Per-tenant metering	Usage, budgets and chargeback per tenant with billing-system feeds	Every unit of consumption invoiceable — no leakage
	Tenant health & renewals	Usage, cost and health per tenant with 90-day renewal flags	Churn managed on data, not anniversary surprises
CONTROL	Native multi-tenancy	Identity, network, data and cost isolation enforced by the platform	Strict boundaries auditable per tenant
	SLA accountability	Per-tenant service levels monitored and reported	The operator's SLA culture extended to cloud
	Per-tenant compliance	Policy, scanning and audit at operator and tenant scope	Sell governance as a feature, not a promise
SCALE	Multi-DC federation	Central, regional and edge sites as one control plane	Capacity placed where the tenant and the law require
	Automated provisioning	Tenant creation and signed licence issuance via the provisioning bridge	Onboarding in hours — audited end to end
	Migration engine	Six-platform onboarding machine for new tenants	Every migration a faster, repeatable revenue event

Contract terms: 1 / 3 / 5 year • 2-year –10% • 3-year –15% • regional pricing on request. Specifications as of August 2026; not a contractual specification.

Digging Into the Work — Before and After

Colocation tenant to cloud tenant

AS IS

- Tenant consumes space & power only
- Cloud spend goes to hyperscalers
- Renewal negotiated on price

TO BE • ON BLUEWHALE STACK

- Governed cloud services on the same footprint
- Metered, billed, operator-branded
- Renewal anchored on services, not rack rate

Pattern from the field: the first services attached to an existing colocation base are the cheapest revenue an operator will ever add — the tenant, the trust and the footprint already exist.

Launching managed enterprise cloud

AS IS

- Enterprise customers ask; no productized answer
- Build programme quoted in years
- Hyperscalers court the operator's own accounts

TO BE • ON BLUEWHALE STACK

- White-label platform live in one quarter
- Catalog, tenancy, metering, SLA — day one
- The operator sells platform, not just circuits

Pattern from the field: a productized platform launch beats an internal build by years — and the enterprise conversation changes from connectivity pricing to ICT partnership.

GETTING STARTED

Step	What happens	Duration
1 • Discovery workshop	Map the estate, the regulatory posture and the ambition; agree prototype scope.	One week
2 • Working prototype	The Telco & Datacenter Edition live on the organization's own environments — full-featured, 90 days, no licence cost.	2–4 weeks to first insight
3 • Evaluation on evidence	Capability scorecard and findings — judged on the organization's own numbers.	Day-90 review

Next step
