

SCOPE OF WORK

Corporate Website & Digital Platform

A complete scope for a world-class web presence spanning the BlueWhale Stack platform, its five editions, the partner ecosystem, and the wider product family.

DOCUMENT	VERSION	DATE	STATUS
Scope of Work (SOW)	1.0	14 June 2026	For approval

About this document

Title	BlueWhale Stack — Corporate Website & Digital Platform: Scope of Work
Version	1.0 (for approval)
Date	14 June 2026
Prepared for	BlueWhale Stack — Leadership, Marketing & Delivery teams
Audience	Leadership / client stakeholders, internal build team, and any external vendor or agency engaged to deliver the work
Purpose	Define the vision, scope, content, design direction, technical approach, and phased plan for the new BlueWhale Stack website
Scope boundary	This document defines the <i>website</i> . It documents the products, editions and Partner Portal only to the depth the website must present them; it is not a product engineering spec.

Contents

1. Executive summary	
2. Objectives & success criteria	
3. Current state → target state	
4. Product & ecosystem overview	Platform · 5 editions · module catalog · Partner Portal · adjacent products
5. Target audiences & personas	
6. Information architecture & sitemap	
7. Page-by-page scope	
8. Design system & brand	
9. World-class experience layer	
10. Content & asset plan	
11. Technical architecture	
12. Quality standards (SEO, accessibility, performance)	
13. Integrations	
14. Build phases & indicative timeline	
15. Deliverables & acceptance criteria	
16. Assumptions, dependencies & risks	
17. Inputs required from BlueWhale Stack	
18. Appendix — content inventory	

Executive summary

BlueWhale Stack is not a single product — it is a **unified, hyperscaler-neutral cloud management platform** delivered in five editions, surrounded by a multi-tenant **Partner Portal** and a family of adjacent products (WhaleForge, Pandava OS, BlueWhale Fincore). The current website does not yet convey that scale: it reads as a basic brochure site and undersells a platform that competes with the likes of Flexera, ServiceNow CMP, Datadog and Terraform — combined.

This Scope of Work defines a **world-class corporate website** that matches the ambition of the product: a fast, credible, conversion-focused experience that lets a CIO, a FinOps lead, a datacenter operator, a government buyer, or a reseller each find their story within seconds — backed by interactive architecture, a clear edition comparison, deep module detail, and a dedicated partner journey.

5

platform editions to present clearly and honestly

17

platform modules across Foundation, Operations, Builder, Datacenter & AI

8

industry verticals with tailored regulatory narratives

What this document delivers

- A complete **content inventory** of the platform, the five editions, every module, the Partner Portal, and the adjacent products — the raw material the site must present.
- A full **information architecture** and a **page-by-page scope** for every page of the site.
- A **design system** and a defined "**world-class experience layer**" that lifts the site from basic to best-in-class.
- A **technical approach, quality standards**, and a **phased plan with an indicative timeline** (no commercials).

Foundation already in place. Phase 1 is built: a Next.js 15 + TypeScript application with a design system, a typed content layer, and data-driven Editions, Modules, Industries and Solutions pages already run locally. This SOW scopes the journey from that foundation to a launched, world-class site.

SECTION 2

Objectives & success criteria

The website exists to do five jobs. Each has a measurable success criterion.

Objective	What it means	Success criterion
Position the platform	Establish BlueWhale Stack as a category-defining, hyperscaler-neutral CMP — not a point tool.	A first-time visitor can describe what BlueWhale Stack does within 10 seconds of landing.
Generate qualified demand	Convert visitors into demo requests and sales conversations.	Clear primary CTA on every page; demo form < 60s to complete; tracked conversion funnel.
Sell the right edition	Help each buyer self-identify the edition (Standard / Enterprise / Datacenter / Government / Telco) that fits.	Interactive comparison + per-edition pages; "which edition" guidance.
Recruit partners	Attract resellers, MSPs and technology partners into the Partner Portal.	Dedicated partner journey + portal showcase + apply flow.
Earn trust	Prove credibility through architecture depth, compliance posture, and customer outcomes.	Compliance badges, security narrative, case studies, and real architecture diagrams.

Quality bar

Performance

Lighthouse 90+ across Performance, SEO, Best Practices, Accessibility. Core Web Vitals in the green on 4G mobile.

Accessibility

WCAG 2.1 AA: semantic structure, keyboard navigation, contrast, focus states, reduced-motion support.

SEO

Per-page metadata, OpenGraph, JSON-LD, sitemap & robots, clean URLs, server-rendered content.

Maintainability

Typed content layer with a CMS-ready seam so non-technical editors can take over later.

SECTION 3

Current state → target state

The brief is explicit: the current site "looks like a very basic website." The table below names the gap and the target for each dimension that separates a basic B2B site from a best-in-class platform site.

Dimension	Today (basic)	Target (world-class)
Narrative	Generic "cloud management" copy; product scale invisible.	Sharp category story; 5 editions, 17 modules, partner ecosystem all legible.
Depth	Flat marketing pages.	Per-edition, per-module, per-industry depth with real architecture.
Visual craft	Plain sections, placeholder feel.	Refined enterprise design, interactive diagrams, considered motion.
Interactivity	Static.	Edition comparator, module explorer, animated stats, scroll storytelling.
Proof	Thin trust signals.	Compliance posture, security narrative, case studies, named outcomes.
Partner story	Absent / a single page.	Full partner journey + Partner Portal showcase + apply flow.
Conversion	Weak CTAs.	Consistent demo/contact funnel, instrumented and optimised.

What makes a "best-in-class" enterprise platform site

The benchmark set (Stripe, Linear, Vercel, Datadog, ServiceNow) shares a recognisable pattern that this scope adopts:

- **Clarity over cleverness** — a one-line value proposition the reader cannot misread.
- **Show the product** — real UI, real architecture, not stock abstractions.
- **Layered depth** — skimmers get the gist; evaluators can drill into module and architecture detail.
- **Speed & polish** — instant loads, crisp typography, restrained motion that guides the eye.
- **Trust everywhere** — security, compliance and outcomes woven through, not buried in a footer.

Product & ecosystem overview

This section is the **content the website must present**. It is the single source of truth for the platform story, the five editions, the module catalog, the Partner Portal, and the adjacent products. The website's page copy derives from here.

4.1 The platform

BlueWhale Stack is a **unified Cloud Management Platform (CMP)** that consolidates inventory, provisioning, security & compliance, ITSM, observability, FinOps, migration and AI-driven operations into a single, hyperscaler-neutral control plane — across public cloud, private cloud, hybrid and on-premise datacenters. It replaces a stack of point tools (Datadog + ServiceNow CMP + Flexera + Terraform) with one platform, with **Whale AI** (Claude-powered) across every module rather than bolted on.

Hyperscaler-neutral
AWS, Azure, GCP, Oracle, IBM, Alibaba, plus VMware, Hyper-V, OpenStack & bare-metal.

Any operating model
SaaS, BYOC (your cloud), and air-gapped Sovereign deployment.

AI-native
Whale AI tiers — Spark, Tide, Abyss, Predictive-Ops — across the platform.

4.2 The five editions

One platform, packaged for five distinct operating models. Standard, Enterprise and Datacenter are the core SKUs; Government and Telco are vertical configurations of the Enterprise + Sovereign platform, presented as full editions but described honestly.

Edition	Positioning	For	Deployment	Price anchor
Standard	See, secure & govern your AWS/Azure/GCP estate — no AI tax, no sprawl.	SMB, single-region SaaS teams, departmental IT, OEM	SaaS only	~\$24K / yr
Enterprise	Assess, migrate, govern, observe & automate across every cloud, region & regulation.	Large enterprise, BFSI, regulated industries	SaaS · BYOC · Sovereign	~\$120K / yr+
Datacenter	Operator / fleet edition — DCIM, bare-metal, capacity & cross-DC migration; resell white-label cloud.	DC operators, colocation, hyperscale AI DCs	BYOC · Sovereign · air-gap	Contact sales
Government	Sovereign, compliant, air-gapped cloud for national & public sector.	Federal/state govt, ministries, defense	Sovereign · on-prem	Contact sales
Telco & MSP	Multi-tenant, white-label, monetizable managed cloud for operators & MSPs.	Telecom operators, MSPs, CSPs	SaaS · BYOC	Contact sales

Honesty guardrail. Government and Telco are configurations of the Enterprise/Sovereign platform. Website copy presents them as editions while staying truthful — no invented separate codebase. Pricing anchors are list/illustrative and can switch to "contact sales" everywhere on request.

Per-edition detail

Standard

Single-region SaaS (Singapore). Modules: Identity, Cloud Connectors, Inventory, Provisioning, Audit Logs, Security & Compliance, Whale AI Spark. Limits: 1 tenant, 5 cloud accounts, 1,000 resources, 10 users.

Enterprise

Everything in Standard + Migration, Observe, ITSM (advanced), Landing Zone, WhaleForge, FinOps, Whale AI Spark/Tide/Abyss. Regions: SIN, BOM, FRA, LAX. SaaS / BYOC / Sovereign.

Datacenter

Enterprise + DCIM (site→room→row→rack→unit), Bare-Metal Lifecycle, Capacity Planning, Backup/DR, Predictive-Ops AI. Go edge agents (Redfish/IPMI/SNMP). Design partners include DataVolt, AdaniConneX, Reliance Jio.

Government & Telco

Government = Enterprise on air-gapped Sovereign deployment, in-region AI, no call-home. Telco & MSP = multi-tenant Enterprise with white-label tenant portals and per-tenant billing.

4.3 Module catalog

A shared platform of **17 modules** gated per edition. The website dedicates a page to each module (problem, how it works, features, edition availability, architecture diagram).

Group	Module	What it does
Foundation	Identity & Access	SSO/SCIM/OIDC federation, MFA, fine-grained RBAC, privileged-session recording.
	Cloud Connectors	One control plane over 9+ clouds & hypervisors, agentless onboarding.
	Inventory / URM	Live unified resource map with dependency graphs and drift tracking.
	Provisioning & Catalog	Self-service catalog with policy guardrails and approval workflows.
	Audit Logs	Tamper-evident, centralized audit trail for compliance evidence.
Operations	ITSM	Incident/change/problem management, 30+ connectors, auto-ticket from alerts.
	Observe	Logs, metrics & traces (OpenTelemetry) with unified dashboards.
	Migration Engine	Structured migrations with runbooks, wave planning, RPO<1hr / RTO<4hr.
	Security & Compliance	CSPM scanning + CIS/NIST/ISO/HIPAA monitoring and zero-trust access.
Builder	Landing Zone Builder	Visual VPC/IAM/org design generating Terraform/CloudFormation with guardrails.
	WhaleForge IaC	DSL + GitOps with Banking/Telco/Healthcare/Fintech industry packs.
	FinOps & Billing	Real-time forecasting, rightsizing, anomaly detection, department chargeback.
Datacenter	DCIM	Physical hierarchy, power/thermal/space telemetry, PUE/WUE metrics.
	Bare-Metal Lifecycle	Discover, provision-from-pool, reclaim, re-image physical servers.
	Capacity Planning	ML-driven power/space/GPU headroom forecasts per rack/room/facility.
	Backup & DR	Snapshots, cross-region replication, DC failover runbooks.
Intelligence	Whale AI	Claude-powered tiers: Spark, Tide, Abyss, Predictive-Ops; in-region for sovereign.

Module × edition availability (default inclusion)

Module	Std	Ent	DC	Gov	Telco
Identity, Connectors, Inventory, Provisioning, Audit	✓	✓	✓	✓	✓
Security & Compliance	✓	✓	✓	✓	✓
ITSM, Observe	–	✓	✓	✓	✓
Migration Engine	–	✓	✓	✓	–
Landing Zone, WhaleForge	–	✓	✓*	✓	–
FinOps & Billing	–	✓	✓	✓	✓
DCIM, Bare-Metal, Capacity, Backup/DR	–	–	✓	–	–
Whale AI	Spark	Tide	Pred-Ops	Abyss	Tide

* Datacenter includes Landing Zone; WhaleForge availability per deployment. Matrix mirrors `content/editions.ts` and is the source for the site's comparison table.

4.4 Partner Portal

The **BlueWhale Stack Partner Portal** is a separate, multi-tenant B2B SaaS — the **sales & fulfillment backbone** of the ecosystem. The website must give it a first-class presence: a partner-program narrative, a portal feature showcase, and an apply/onboarding entry point.

Who uses it: resellers (wholesale → resell), channel partners and MSPs (bundled solutions), tier-managed partners (Registered → Silver → Gold → Platinum), and BlueWhale internal staff (account managers, finance, partner managers, admins).

Capability	What it does
Partner onboarding & tiering	Register partners, capture legal/tax details, assign tier with margin ceilings & SLA, track health score & lifecycle (Active / At-risk / Churned).
Deal registration	Submit deals (BWS license / cloud service / consulting), workflow Submitted→Approved→Won/Lost, SLA-based approval deadlines & escalation, deal protection.
Customer management	Onboard end customers, allocate to partner/internal, multi-region tax-ID registry (GSTIN / TRN / EIN) with verification.
Margin & discount config	Per-partner/product/cloud margin %, tier-ceiling enforcement, discount-request approval workflow, live price waterfall (customer price → margin → cost → profit).
Two-sided invoicing + tax engine	BWS→Partner (wholesale) and Partner→Customer (retail) invoices; automatic tax by region (India IGST/CGST+SGST with HSN/SAC, UAE VAT, US sales tax); full invoice lifecycle.
Payments & reconciliation	Razorpay (India), Stripe (UAE/US), manual bank transfer; payment links, webhook reconciliation, auto-mark paid.
Tenant provisioning	Provision Standard/Enterprise tenants on payment or voucher; lifecycle gates; onboarding kit (credentials + welcome) auto-emailed; suspend/resume/extend/revoke.
Internal operations	Financial planning dashboard, analytics, commission tracking with audit, centralized approval queue, immutable audit logging.

Tech (for context): React + Vite + TypeScript, Fastify API, PostgreSQL 16 + Prisma, Clerk auth, Resend email, Razorpay/Stripe, Cloudflare R2. The marketing site links to the portal; it does not re-implement it.

4.5 Adjacent products

WhaleForge

Declarative, templated
Infrastructure-as-Code engine with
industry landing-zone packs.
Feeds automated provisioning
across the platform.

Core motion

Pandava OS

Sovereign Indian Linux OS family
(5 editions, "Make in India"),
hardened by default, 22 Indian
languages. Complements
sovereign/air-gap deployments.

Adjacent venture

BlueWhale Fincore

UAE FTA e-invoicing SaaS
(bluewhalefincore.ae) — vertical
fintech product with its own GTM.

Adjacent venture

The website features **WhaleForge** within the platform story, and gives **Pandava OS** and **Fincore** concise "from the BlueWhale family" pages — present but clearly positioned as adjacent ventures, subject to your confirmation on how publicly to feature them.

SECTION 5

Target audiences & personas

The site must let each persona self-select quickly. Navigation, edition pages and industry pages are organised around these journeys.

Persona	Cares about	Primary destination
CIO / Head of Infrastructure	Consolidation, migration off the data center, vendor-neutrality, risk.	Platform, Enterprise edition, Migration solution.
FinOps lead / CFO office	Cost visibility, chargeback, savings in a quarter.	FinOps module, FinOps solution.
CISO / Compliance	Zero-trust, CSPM, audit evidence, frameworks.	Security & Compliance, industry pages.
Datacenter operator	DCIM, bare-metal, capacity, monetizing spare capacity.	Datacenter edition, DCIM module.
Government buyer	Sovereignty, air-gap, data residency, compliance.	Government edition, Government industry.
Telco / MSP	Multi-tenant, white-label, billing, monetization.	Telco edition, Telco industry, Partners.
Reseller / channel partner	Margins, deal registration, enablement, portal.	Partners + Partner Portal showcase.

SECTION 6

Information architecture & sitemap

The full route tree. Items marked **built** exist from Phase 1; **new** are added by this scope.

Route	Page	Status
/	Home	built
/platform	Platform overview + module map	build out
/editions + /editions/{5}	Editions overview + 5 edition pages	built
/modules + /modules/[slug]	Module catalog + 17 module pages	built
/industries + /industries/[slug]	Industries + 8 vertical pages	built
/solutions + /solutions/[slug]	Solutions + 6 outcome pages	built
/partners	Partner ecosystem & programs	build out
/partners/portal	Partner Portal showcase (features, screens, apply)	new
/products/whaleforge	WhaleForge (IaC)	new
/products/pandava-os	Pandava OS	new
/products/fincore	BlueWhale Fincore	new
/pricing	Pricing & editions comparison	build out
/about	About / company	build out
/resources + /resources/[slug]	Resource library + detail	build out
/docs	Documentation hub	build out
/careers + detail/apply	Careers + jobs	build out
/contact	Demo & contact	build out
/legal/privacy, /legal/terms	Legal	build out

Global: sticky header with mega-menu (Platform / Editions / Industries / Solutions / Resources / Company), footer with full link map + compliance row + newsletter, persistent demo CTA, and an assistant widget.

SECTION 7

Page-by-page scope

For every page: its purpose, the sections it contains (in order), and the assets it needs. This is the build checklist.

Home /

Purpose: establish category, prove breadth, drive demo.

1. Hero — value proposition, dual CTA, trust strip (clouds, regions, compliance).
2. Cloud/logo strip.
3. Problem → promise (sprawl, blind spend, compliance drag → one control plane).
4. Core capabilities — 6 module tiles.
5. Editions teaser — 5 cards.
6. Industries strip — 8 verticals.
7. How it works — 4 steps.
8. Outcomes band — headline stats.
9. Testimonials — 3 named.
10. Resources teaser + closing CTA.

Assets: hero visual / product montage; client logos (with permission).

Platform /platform

1. Hero — "one platform, every cloud."
2. Unified-CMP narrative (replaces N point tools).
3. **Interactive module map** — control plane over clouds/on-prem.
4. Capability deep-tiles by group.
5. Deployment models (SaaS / BYOC / Sovereign / On-prem).
6. Whale AI overview (4 tiers).
7. Security & compliance posture.
8. CTA.

Assets: platform architecture diagram (code-based SVG).

Editions — overview + 5 detail pages

Overview: hero, 5 cards, **modules-by-edition comparison matrix**, "which edition?" guide. Each detail page: hero (badge, headline, audience), positioning, what's-included checklist, **architecture diagram**, key specs (deploy / AI tier / price), modules grid, comparison strip, CTA.

Modules — overview + 17 detail pages

Overview: grouped catalog (Foundation/Operations/Builder/Datacenter/AI). Each detail page: header, description, key features, "available in" edition badges, **architecture/flow diagram**, CTA.

Industries — overview + 8 detail pages

Verticals: Government, Telco & MSP, BFSI, Healthcare, Manufacturing, Energy & Utilities, Media, Enterprise SaaS. Detail: hero (industry image), challenges, why BlueWhale, KPIs, compliance mapping (RBI/MAS/HIPAA/NCA...), targets, case-study teaser, CTA.

Solutions — overview + 6 detail pages

Outcomes: Migration Factory, FinOps & Cost Intelligence, Security & Compliance, Cloud Automation & DevOps, Data Center Management, Sovereign Cloud. Detail: problem statement, approach (connected capabilities), architecture diagram, measurable outcomes, who-it's-for, related modules, CTA.

Partners /partners + Partner Portal showcase /partners/portal

1. Partners hero — "grow together, win together."
2. Why partner — revenue, differentiated portfolio, enablement.
3. Three programs — Technology, Channel/Reseller (Silver/Gold/Platinum margins), MSP.
4. **Partner Portal showcase** — deal registration, two-sided invoicing, margins, provisioning, tiering, with annotated screens.
5. Onboarding steps + apply flow + CTA.

Assets: portal UI captures / annotated mockups; partner journey diagram.

Products — WhaleForge, Pandava OS, Fincore

Concise product page each: positioning, key features, who it's for, how it relates to BlueWhale Stack, CTA. "From the BlueWhale family" framing.

About /about

1. Hero + mission.
2. Our story / why we exist (sprawl + sovereignty thesis).
3. Mission & principles (Unified, AI-native, Open, Sovereign-ready).
4. What we build — the product family.
5. By the numbers.
6. Global presence — 4 offices.
7. Leadership / team.
8. Certifications & trust.
9. Careers teaser + CTA.

Inputs needed: leadership bios & photos, mission wording, founding details.

Pricing / Resources / Docs / Careers / Contact / Legal

Pricing: edition tiers + comparison + FAQ. **Resources:** filterable library (whitepapers, case studies, webinars, blog) + gated detail. **Docs:** hub linking product docs. **Careers:** perks + roles + application form. **Contact:** demo form + channels + offices. **Legal:** privacy & terms.

SECTION 8

Design system & brand

Modern-enterprise, refined — the altitude of Stripe / Linear / Vercel. Mostly light surfaces with selective dark hero/CTA drama.

Color

Brand blue **#002da1** (primary), cyan/teal accent, a refined slate neutral scale, semantic success/warn. Dark "ink" surfaces for heroes & CTAs.

Typography

Display: Plus Jakarta Sans / Geist. Body: Inter / IBM Plex Sans. Fluid type scale via `clamp()`.

Components

Button, Card, Badge/Pill, Stat, Tabs, Accordion, comparison table, logo cloud, breadcrumb, section heading, CTA band, placeholder — a documented library.

Layout & motion

12-column grid, generous whitespace, consistent section rhythm. Restrained motion: fade/slide on scroll, micro-interactions, reduced-motion honored.

Tokens are defined as Tailwind v4 `@theme` variables; the component library is reusable across every page for visual consistency.

World-class experience layer

This is what moves the site from "basic" to best-in-class. Each item is a discrete, scoped enhancement.

Feature	Description
Interactive architecture diagrams	Code-based SVG diagrams (platform, per-edition, per-module) with hover/tap detail — no stock images.
Edition comparator	Toggle/compare editions side-by-side; filter the module matrix by need.
Module explorer	Filterable, grouped module catalog with quick-look panels.
Animated stat counters	Headline metrics count up on scroll; subtle, performance-safe.
Scroll storytelling	"How it works" and migration flows revealed step-by-step on scroll.
Partner Portal walkthrough	Annotated, interactive tour of deal registration → invoicing → provisioning.
Hero drama	Dark gradient + grid + glow hero with a refined product/architecture visual.
Micro-interactions	Considered hover, focus, and transition states throughout.
Rich case studies	Long-form, outcome-led customer stories with metrics.
Assistant widget	Helpful in-page assistant for routing visitors to the right page / demo.

These are **prioritised, not all-or-nothing**. Phase 4 (\$14) delivers the highest-impact items first — interactive diagrams, the edition comparator, and the Partner Portal walkthrough.

Content & asset plan

Asset	Approach	Owner
Page copy	Derived from this SOW & the typed content modules; refined per page.	BlueWhale + delivery team
Architecture diagrams	Built as on-brand code-based SVG (platform, editions, modules) — editable, no licensing.	Delivery team
Industry & hero imagery	Licensed stock or commissioned photography; placeholders until supplied.	BlueWhale to provide
Iconography	Consistent open-license icon set (lucide), mapped per module/industry.	Delivery team
Logos & brand	Reuse existing BlueWhale logo SVGs; refine usage.	BlueWhale
Customer logos & testimonials	Real names/logos with written permission; otherwise anonymised.	BlueWhale to confirm
Partner Portal screens	Annotated captures or clean mockups for the showcase.	BlueWhale + delivery team
Optional video	Short product/explainer video for the hero (later phase).	Optional

Technical architecture

Framework

Next.js 15 (App Router) + TypeScript + React 19.
Server-rendered for SEO & speed; statically generated where possible.

Styling

Tailwind CSS v4 with `@theme` design tokens + a reusable component library (consistent with the product UI).

Content layer

Typed content in `content/*.ts` behind a single `lib/content.ts` access seam — a CMS (Directus or other) can replace the source later with zero component changes.

Forms

Next.js route handlers (`app/api/*`) for `demo / contact / newsletter / careers`; validation + email (Resend/SMTP); DB on deploy.

SEO & metadata

Per-page metadata, OpenGraph, JSON-LD (Organization/Product), `sitemap.xml`, `robots.txt`.

Hosting

Vercel, Railway, or Azure — decided at deploy-prep.
Containerizable (Docker) if required.

CMS-ready by design. Content is self-contained today so the site runs with no external services, but the seam means editors can move to a headless CMS without a rebuild — your earlier "decide later" choice, preserved.

Quality standards

Area	Standard
Performance	Lighthouse 90+; Core Web Vitals green on mobile 4G; image optimization; code-splitting; font display swap.
Accessibility	WCAG 2.1 AA — semantic landmarks, alt text, keyboard nav, visible focus, AA contrast, reduced-motion.
SEO	SSR/SSG content, clean URLs, canonical tags, structured data, XML sitemap, per-page meta & OG.
Analytics	Privacy-respecting analytics + conversion events on every CTA & form.
Browser support	Latest 2 versions of Chrome, Edge, Safari, Firefox; responsive 360px→wide desktop.
Security	Security headers/CSP, no secrets in client, spam protection on forms, rate limiting.

Integrations

- **Demo / lead capture** — form → email notification + storage; optional CRM (HubSpot/Salesforce) hand-off.
- **Partner Portal** — deep links and "Become a partner / Partner login" entry points to the portal; optional shared SSO later.
- **Email** — transactional email (Resend or SMTP) for confirmations & notifications.
- **Analytics & tag management** — site analytics + conversion tracking.
- **Documentation** — links to product docs / API reference.

Build phases & indicative timeline

A phased delivery. Durations are **indicative working estimates** for planning only — no commercial commitment. Phases can overlap; content readiness is the main dependency.

Phase	Focus	Key deliverables	Indicative
0	Discovery & content finalization	Confirm scope, copy, KPI sign-off, asset list, brand assets.	~1 week
1	Foundation & design system done	Next.js app, tokens, component library, content layer, layout, Home.	complete
2	Core product pages	Platform build-out; Editions, Modules, Industries, Solutions polished to final design.	~2 weeks
3	Marketing & company pages + forms	About, Pricing, Partners, Partner-Portal showcase, Products, Resources, Docs, Careers, Contact; forms wired.	~2 weeks
4	World-class experience layer	Interactive architecture diagrams, edition comparator, module explorer, portal walkthrough, motion.	~2–3 weeks
5	Content, imagery, SEO & QA	Final copy & images, SEO/structured data, accessibility & performance pass, cross-browser QA.	~1–2 weeks
6	CMS (optional), launch	Optional CMS integration, hosting setup, domain, analytics, go-live.	~1 week

Indicative total: ~9–11 weeks of focused delivery from Phase 2, excluding client review cycles and asset turnaround. The phasing front-loads a credible, content-rich site (Phases 2–3) before the differentiating experience layer (Phase 4).

Deliverables & acceptance criteria

Deliverable	Acceptance criterion
Running website (all pages)	Every route in §6 renders, responsive, no console/type errors, build passes.
Design system & components	Documented, reused consistently across pages.
Interactive experience layer	Prioritised features from §9 implemented & performant.
Architecture diagrams	On-brand SVGs for platform, editions & key modules.
Forms & integrations	Demo/contact submit, validate, notify, and store; partner entry points live.
SEO & analytics	Metadata, structured data, sitemap, analytics & conversion events verified.
Quality pass	Lighthouse 90+, WCAG AA, cross-browser sign-off.
Handover	Source repo, README, content-edit guide, deploy runbook.

Assumptions, dependencies & risks

Assumptions

- Product positioning in §4 is accurate and approved for public use.
- The Next.js + TypeScript stack and modern-enterprise design direction are confirmed.
- BlueWhale provides brand assets, imagery, leadership content & any customer permissions.

Dependencies

- Timely content/asset sign-off (the primary schedule driver).
- Decisions on published pricing vs "contact sales", and on featuring Pandava OS / Fincore.
- Hosting, domain & (optional) CMS decisions before launch.

Key risks & mitigations

Risk	Mitigation
Unconfirmed KPI / metric figures	Label as "target/illustrative" until verified; swap on sign-off.
Asset/content delays	Placeholders + phased build keep momentum; content can land per page.
Scope creep on experience layer	§9 features prioritised; deliver highest-impact first.
Over-claiming on Government/Telco	Honest "vertical configuration" framing maintained.

Inputs required from BlueWhale Stack

1. **KPI confirmation** — which headline/industry metrics are real vs illustrative.
2. **Pricing decision** — publish anchors (\$24K / \$120K) or "contact sales" throughout.
3. **Brand assets** — final logos, color/type confirmation, any brand guidelines.
4. **Leadership content** — names, titles, photos, bios; company mission & founding details.
5. **Customer proof** — logos & testimonials with written permission.
6. **Imagery** — industry/hero photography or budget to license.
7. **Partner Portal assets** — screens/mockups for the showcase; partner entry URLs.
8. **Adjacent products** — confirm whether/how to feature Pandava OS & Fincore.
9. **Hosting, domain & CMS** — target platform & whether a CMS is in scope now.

Appendix — content inventory

A. Industries (8)

Industry	Angle	Key compliance
Government	Sovereign, compliant, secure.	DPDP, GDPR, CERT-In, air-gapped
Telco & MSP	Monetize, launch, scale.	NCA-ECC, CITC
BFSI	Compliant, secure, governed.	RBI 2024, MAS TRM, PCI-DSS, PDPA
Healthcare	Secure, private, compliant.	HIPAA, ADHICS v2, GDPR
Manufacturing	Hybrid cloud for plant operations.	ISO 27001, OT/IT segmentation
Energy & Utilities	Govern critical infrastructure.	NERC-CIP, Zero Trust
Media & Entertainment	Elastic, fast, cost-controlled.	Content security, DRM, GDPR
Enterprise SaaS	Govern, standardize, scale.	SOC 2, ISO 27001, GDPR

B. Solutions (6)

Solution	Headline outcome
Cloud Migration Factory	40–60% faster migrations; <2% cut-over failures; RPO<1hr.
FinOps & Cost Intelligence	20–30% cost reduction in 90 days; 95%+ tag coverage.
Security & Compliance	95%+ compliance in 90 days; critical vulns to zero.
Cloud Automation & DevOps	147+ runs/day; 98.5% success; 248 hrs saved/month.
Data Center Management	99%+ inventory accuracy; PUE 1.42; zero capacity overruns.
Sovereign Cloud Management	100% provable residency; 5 sovereign regions; audit in minutes.

C. Partner Portal — core entities

Partner

Tier

Deal

Customer

Margin config

Discount request

Invoice (2-sided)

Payment

Provisioning

Voucher

Approval request

Commission

Audit log

User/role

D. Reference

Source content modules: `content/editions.ts`, `content/modules.ts`, `content/industries.ts`, `content/solutions.ts`, `content/company.ts`. Per-page docs in `content/pages/`. Diagram specs in `design/diagrams.md`.

End of Scope of Work v1.0. On approval, delivery begins at Phase 2 (core product pages) with the inputs in \$17 gathered in parallel.
